

Proportional Pressure-Reducing Cartridge, Size 10

 $Q_{max} = 120$ l/min, $p_{max} = 315$ bar Seated pilot, spool-type main stage Series DRPSA-5D...

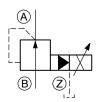

- Compact construction for cavity type DD – M24 x 1.5
- Operated by a proportional solenoid
- 5 pressure ranges available
- External pilot-oil drain
- Excellent stability over the whole pressure and flow range
- All exposed parts with zinc-nickel plating
- · High pressure wet-armature solenoids
- The slip-on coil can be rotated, and it can be replaced without opening the hydraulic envelope
- Various plug-connector systems and voltages are available
- Can be fitted in a line-mounting body
- Can be fitted in sandwich bodies

1 Description

Series DRPSA-5D... two-stage proportional pressure-reducing valves are size 10, high performance screw-in cartridges with an M24x1.5 mounting thread. They consist of a spool-type main stage and a leak-free, poppet-type pilot stage. These cartridges reduce the outlet pressure in A proportionally to the control current and independently of the inlet pressure in B. In the initial position (solenoid de-energised), the connection $B \rightarrow A$ is open until the pressure reaches the minimum setting. Five spring ranges are available in order to obtain precise pressure settings over the whole of the required pressure range. To achieve a high degree of functional stability in systems that are susceptible to oscillation, the pilot drain (port Z) must be routed to tank with the least possible back-pressure. These proportional pressure-reducing cartridges are predominantly used in mobile and industrial applications for reducing a system pressure. All external parts of the cartridge are zinc-nickel plated to DIN 50 979 and are thus suitable for use in the harshest operating environments. The slip-on coils can be replaced without opening the hydraulic envelope and can be positioned at any angle through 360°. If you intend to manufacture your own cavities or are designing a line-mounting installation, please refer to the section "Related data sheets".

6 Installation information

IMPORTANT! P

To achieve the proportional pressure-reducing cartridge's maximum performance rating, fit the solenoid coil as shown (with the plug pins at the bottom). When fitting the cartridges, note the mounting attitude (preferably vertical, with coil down \rightarrow automatic air bleed) and use the specified tightening torque. No adjustments are necessary, since the cartridges are set in the factory.

ATTENTION!

Only qualified personnel with mechanical skills may carry out any maintenance work. Generally, the only work that should ever be undertaken is to check, and possibly replace, the seals. When changing seals, oil or grease the new seals thoroughly before fitting them.
